

CollectionListing

Sales Channel SDK

The CollectionListing resource is available to [Sales Channel SDK](#) applications only.

The `collection_listings` object represents the list of product collections that merchant your channel. Each collection listing is represented by its `collection_id`. You can use this to retrieve collections for addition to your channel platform app. When used in conjunction with this enables customers to view products in their collections. You can also retrieve a list of collections published to a specific `collection_id`, or retrieve a specific `collection_listing` using

What you can do with CollectionListing

The Shopify API lets you do the following with the CollectionListing resource. More detailed general actions may be available:

- [GET /admin/collection_listings.json](#)
Retrieve collection listings that are published to your app
 - [GET /admin/collection_listings/{id}/product_ids.json](#)
Retrieve `product_ids` that are published to a `collection_id`
 - [GET /admin/collection_listings/{id}.json](#)
Retrieve a specific collection listing that is published to your app
-
