◆ PBIRS (<http://dataap.org/blog/tag/pbirs/>), Power BI Report Server (<http://dataap.org/blog/tag/power-bi-report-server/>), rest api (<http://dataap.org/blog/tag/rest-api/>)

## Power BI Report Server – Change Data Source using REST APIs (<http://dataap.org/blog/2020/01/16/power-bi-report-server-change-data-source-using-rest-apis/>)

This post gives an idea that you can change the Power BI report's data source without using Power BI desktop. Do you think it is possible? I am talking about Power BI Report Server.

Yes. This is possible with the help of Power BI Report Server REST APIs. You can go through the supported API methods using the below URL.

<https://app.swaggerhub.com/apis/microsoft-rs/PBIRS/2.0> (<https://app.swaggerhub.com/apis/microsoft-rs/PBIRS/2.0>)

The syntax of the REST API is <http://<reportservername>/reports/api/v2.0/> (<http://%3creportservername%3e/reports/api/v2.0/>)

Scenario:

I have a report published into Power BI Report Server portal and I want to change the database used on the report to some other database. In this example, I am using a database called IT\_Dev on my report and I will be changing the database to IT\_Prod. Even you can change the server name also.

I am using Postman tool to access the REST APIs. Please check my below article to know about using the Postman with Power BI Report Server REST APIs.

## Oops! That embed can't be found.

It looks like nothing was found at this location. Maybe try visiting **Data Awareness Programme** directly?

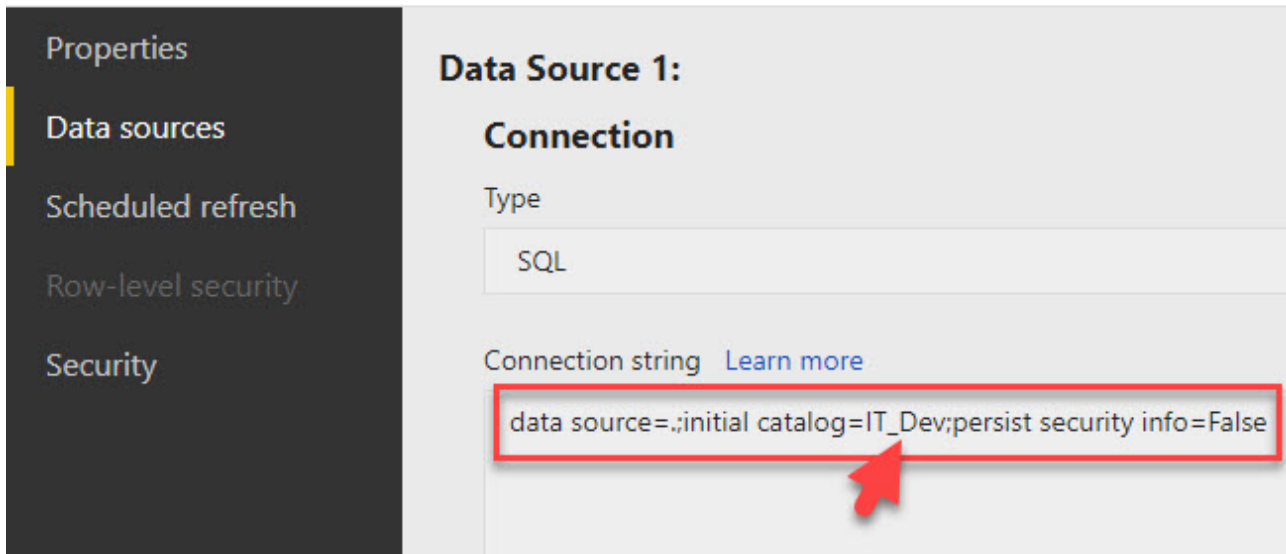

We need to perform 3 main steps.

1. Get the report ID of which we want to change the data source
2. Get the Current data source information of the report
3. Update the data source

Initially the below data source is used on the report.

## Manage Points Direct Q

[Home](#) > [Points Direct Q](#) > [Manage](#) > Data sources

The screenshot shows the 'Manage Points Direct Q' interface. On the left is a dark sidebar with menu items: 'Properties', 'Data sources' (highlighted with a yellow bar), 'Scheduled refresh', 'Row-level security', and 'Security'. The main area is titled 'Data Source 1: Connection'. It shows 'Type' as 'SQL'. Below that, 'Connection string' is displayed with a 'Learn more' link. The connection string is 'data source=.;initial catalog=IT\_Dev;persist security info=False', which is enclosed in a red rectangular box. A red arrow points from the bottom right towards the box.

## Get Report ID

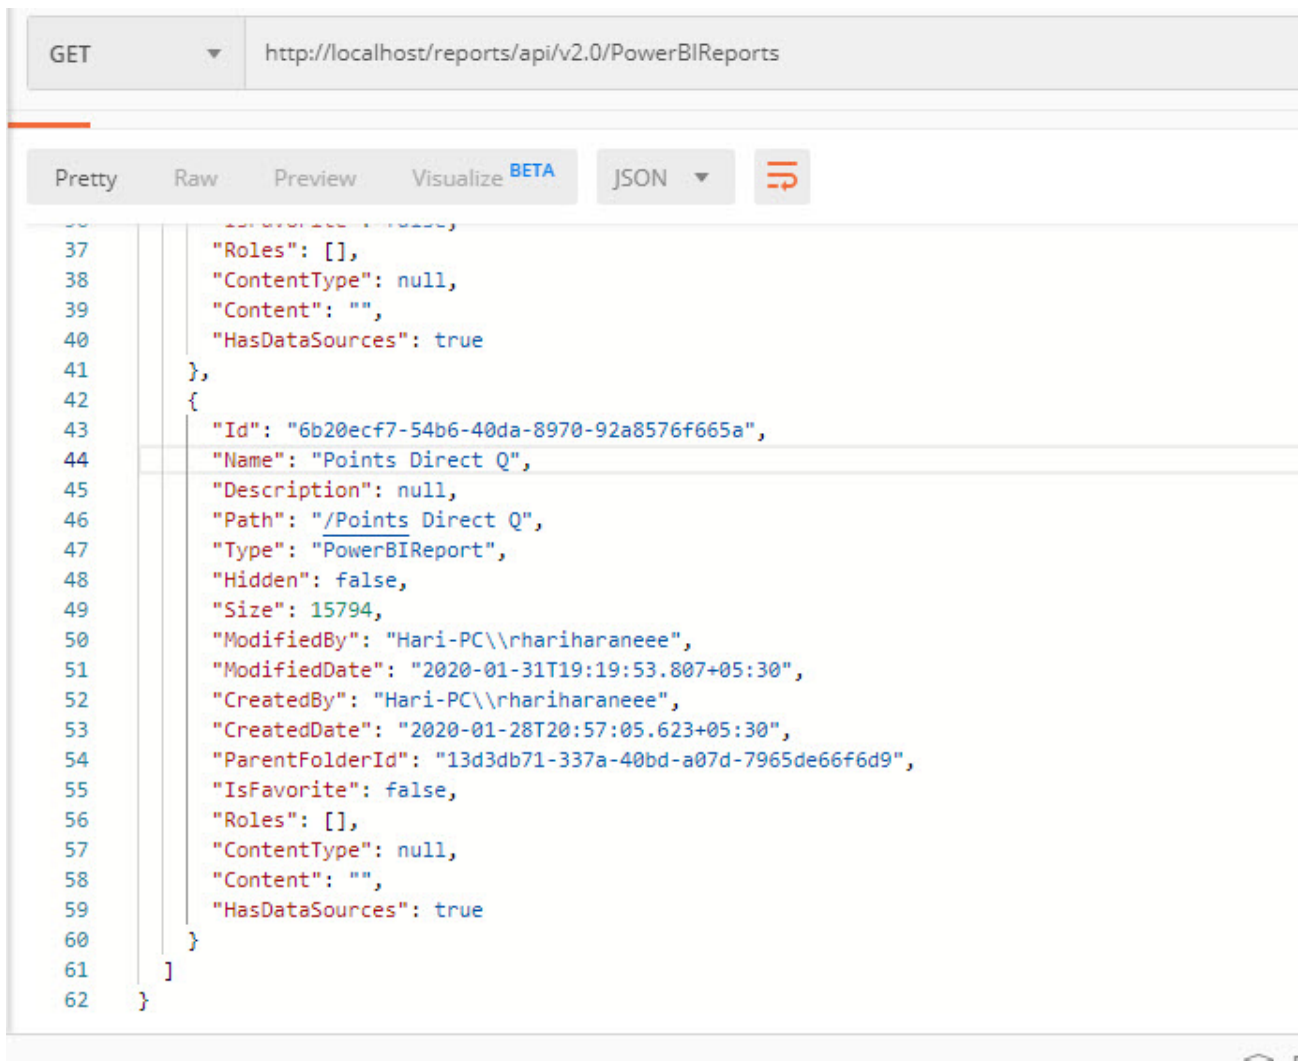

Use the below REST API to get the ID of the report. It will show all other information of the report. Since we are using GET method, you can access this URL on the browser itself.

Method – GET

URL – <http://localhost/reports/api/v2.0/PowerBIReports> (<http://localhost/reports/api/v2.0/PowerBIReports>)

Here PowerBIReports is a REST API which will list out all the reports from report server.

```
GET http://localhost/reports/api/v2.0/PowerBIReports

Pretty Raw Preview Visualize BETA JSON

[
  {
    "Id": "6b20ecf7-54b6-40da-8970-92a8576f665a",

    "Description": null,
    "Path": "/Points Direct Q",
    "Type": "PowerBIReport",
    "Hidden": false,
    "Size": 15794,
    "ModifiedBy": "Hari-PC\\rhariharaneee",
    "ModifiedDate": "2020-01-31T19:19:53.807+05:30",
    "CreatedBy": "Hari-PC\\rhariharaneee",
    "CreatedDate": "2020-01-28T20:57:05.623+05:30",
    "ParentFolderId": "13d3db71-337a-40bd-a07d-7965de66f6d9",
    "IsFavorite": false,
    "Roles": [],
    "ContentType": null,
    "Content": "",
    "HasDataSources": true
  }
]
```

Note down the report ID of the report.

## Get Current Data Source Information

As we are trying to update the data source, we need to know the structure of the current data source so that we can use the same structure while updating the data source.

Method – GET

URL – [http://localhost/reports/api/v2.0/PowerBIReports\(6b20ecf7-54b6-40da-8970-92a8576f665a\)/DataSources](http://localhost/reports/api/v2.0/PowerBIReports(6b20ecf7-54b6-40da-8970-92a8576f665a)/DataSources)  
([http://localhost/reports/api/v2.0/PowerBIReports\(6b20ecf7-54b6-40da-8970-92a8576f665a\)/DataSources](http://localhost/reports/api/v2.0/PowerBIReports(6b20ecf7-54b6-40da-8970-92a8576f665a)/DataSources))

We need to use the captured ID on the above URL.

GET http://localhost/reports/api/v2.0/PowerBIReports(6b20ecf7-54b6-40da-8970-92a8576f665a)/DataSources

27     "CredentialsByUser": null,
28     "CredentialsInServer": null,
29     "IsReference": false

```

Note down the Value section of the result.

## Update the Data Source

In this step, we will update the database from IT\_Dev into IT\_Prod.

Method – PATCH

URL – http://localhost/reports/api/v2.0/PowerBIReports(6b20ecf7-54b6-40da-8970-92a8576f665a)/DataSources

We are using the same URL but with different methods. And, we need to paste the data source value script which we copied on the previous step on the body section. Change the database name and enter the username and password.

Structure:

```

[
{
  "Id": "2dc59c3d-e941-ea11-bed7-08edb9949ce0",

(<http://dataap.org/blog/2019/12/13/power-bi-report-server-rest-api-with-postman/>)

(<http://dataap.org/blog/author/hariharanr/>)By Hariharan Rajendran (<http://dataap.org/blog/author/hariharanr/>)

 postman (<http://dataap.org/blog/tag/postman/>), Report Server (<http://dataap.org/blog/tag/report-server/>), rest api (<http://dataap.org/blog/tag/rest-api/>)

## Power BI Report Server REST API with Postman

(<http://dataap.org/blog/2019/12/13/power-bi-report-server-rest-api-with-postman/>)

This post explains how to use Postman tool to access the Power BI Report Server REST API. As you know, Microsoft Power BI team released the REST API feature for both Power BI Service and Report Server. Using this REST API, we can access and control the Power BI objects.

Use the below URL to access Power BI Report Server REST API.

<http://<reportservername/reports/api/v2.0/>

The list of objects which supported in REST API are,

- AlertSubscriptions
- CacheRefreshPlans
- CacheRefreshPlanHistory
- CatalogItems
- Comments
- DataSets
- DataSetData
- DataSources
- ExcelWorkbooks
- Extensions
- FavoriteItems
- Folders
- Kpis
- LinkedReports
- MobileReports
- Notifications
- PowerBIReports
- Reports
- ParameterDefinitions
- Resources
- Schedules
- Subscriptions
- SystemResources
- SystemResourceItems
- UserSettings
- System
- Me
- Telemetry
- PowerBIIntegration
- ServiceState

Microsoft providing the swagger site to show the detailed REST APIs.

<https://app.swaggerhub.com/apis/microsoft-rs/PBIRS/2.0#/> (<https://app.swaggerhub.com/apis/microsoft-rs/PBIRS/2.0#/>)

Example,

If I want to see the list of Power BI reports then we need to use the below URL on the browser. Actually, it is a get method so we can use the browser.

<http://hari-pc/reports/api/v2.0/PowerBIReports> (<http://hari-pc/reports/api/v2.0/PowerBIReports>)

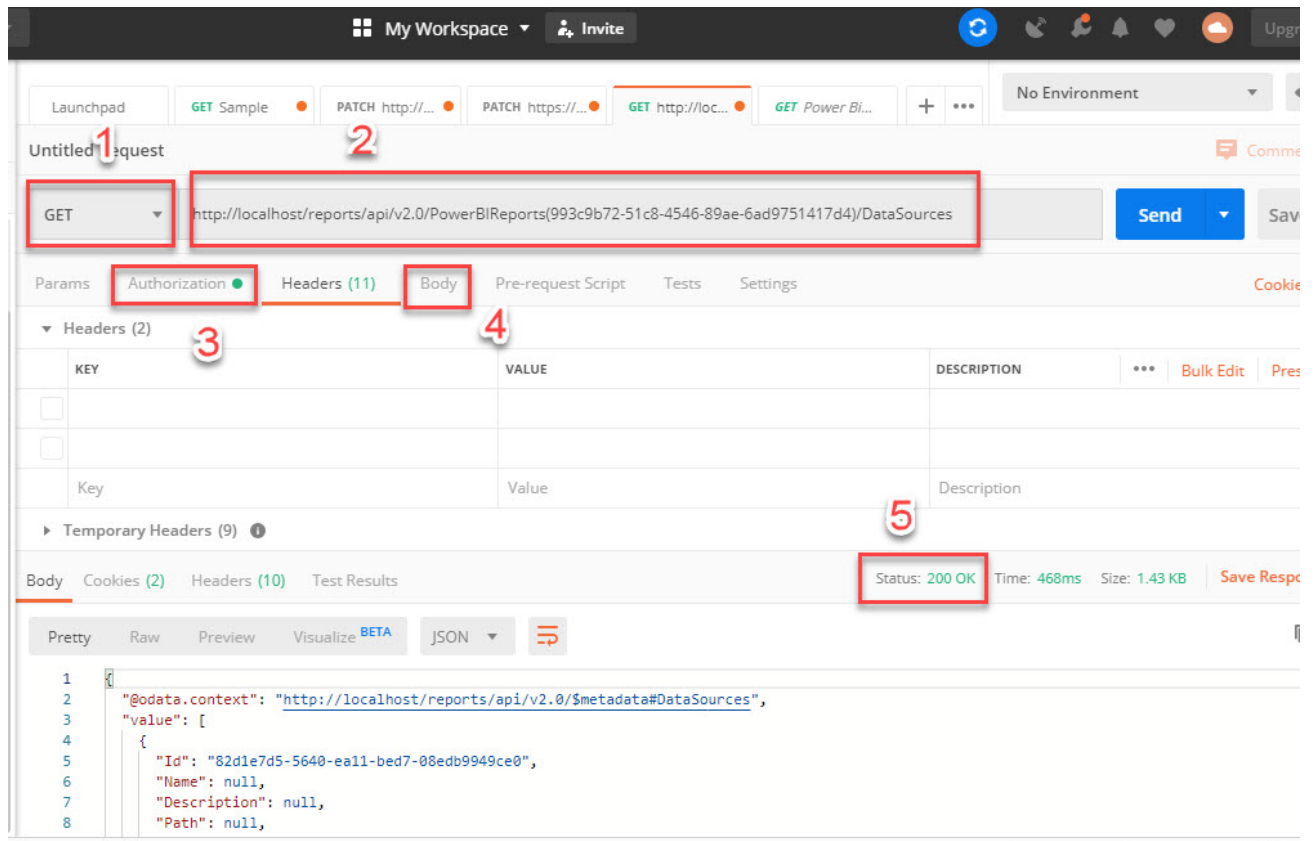

```

{
  "@odata.context": "http://hari-pc/reports/api/v2.0/$metadata#PowerBIReports", "value": [
    {
      "Id": "f97189f6-dc53-4062-bf4f-8dabec433184", "Name": "PBI RS", "Description": null, "Path": "/PBI RS",
      "PC\\r\\hariharaneee", "ModifiedDate": "2019-11-14T20:49:27.62+05:30", "CreatedBy": "Hari-PC\\r\\hariharaneee",
      "a07d-7965de66f6d9", "IsFavorite": false, "Roles": [
        ], "ContentType": null, "Content": "", "HasDataSources": true
      }, {
        "Id": "993c9b72-51c8-4546-89ae-6ad9751417d4", "Name": "Points", "Description": null, "Path": "/Points",
        "PC\\r\\hariharaneee", "ModifiedDate": "2020-01-26T21:47:37.48+05:30", "CreatedBy": "Hari-PC\\r\\hariharaneee",
        "a07d-7965de66f6d9", "IsFavorite": false, "Roles": [
          ], "ContentType": null, "Content": "", "HasDataSources": true
        }
      ]
    }
  ]
}

```

It also will show the properties of each report.

If we want to use the other method like POST, PATCH, PUT and DELETE then we need to use any other application because it can't be done in browsers. Use the Postman tool to access all the REST API methods.

1. Choose Methods
2. Place the URL
3. Authorization
4. Body
5. Status

## Authorization Section

Untitled Request

GET ▼ http://localhost/reports/api/v2.0/PowerBIReports(993c9b72-51c8-4546-89ae-6ad9751417d4)/DataSources Send ▼

Params Authorization ● Headers (11) Body Pre-request Script Tests Settings
